

SmartNetMonitor

*Fingertip monitoring
and control of all
your networked
output devices*

- Real-time desktop tracking of document output
- Ensures efficient deployment of all shared output resources
- Auto-detection for easy networking and management of machines

SmartNetMonitor places simple and effective monitoring, management and control of all your networked output devices at your fingertips. Designed to benefit both end users and network administrators, SmartNetMonitor is an easy-to-use solution that gives instant on-screen feedback about all your shared faxing, scanning, copying and printing devices – from telling you when the machine is ready to print to notification of job completion. With automatic device detection and real-time error monitoring facilities, it's never been easier to ensure efficient and highly productive deployment of all your shared output resources.

SmartNetMonitor

Instant, on-screen feedback

Simply click on the icons in your Windows taskbar to access vital facts about your networked printers or multi-functional products (MFP). It's the easy, efficient route to a well managed and highly productive networked printing environment.

How does it work?

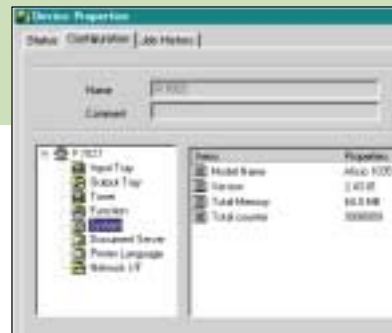

SmartNetMonitor provides a window to all your shared devices. You can monitor the progress of any print job and access every level of device information from automatic detection on the network to page counts.

- Instant device status on-screen.** SmartNetMonitor allows the end user to see at a glance if a machine is being used, is functioning correctly or has completed its task. Users can send jobs to free machines, eliminating frustrating print queues or waiting at the device for the job to be finished.
- Improved efficiency and productivity.** SmartNetMonitor supports both Parallel and Recovery printing to ensure flexible and fail-safe output across the network. Parallel printing enables printers to run in tandem for high-volume jobs, whereas Recovery printing can re-route a job to another printer if an error occurs.
- Comprehensive management tools for administrators.** Automatic device detection and real-time error monitoring facilities mean it's simple and straightforward to install, configure and control all of your networked output devices. With page counts and feedback on all the individual fax, copy, print and scan functions of your MFPs, efficient network management has never been easier.
- Controlled user access.** Administrators can easily restrict user access to certain devices and options of MFPs or remotely lock control panels for greater security and control.

SmartNetMonitor gives end users and administrators fingertip control and management of all shared output devices. Instant on-screen reporting provides users with reassuring tools to monitor device status – reducing helpdesk calls and ensuring efficient utilisation of networked output resources.

SmartNetMonitor, combined with our dedicated hardware, expert consultancy and professional services, is just one example from our range of tailor-made Total Document Solutions.

Simple drop down menus mean a device can be installed and configured quickly

The configuration tab displays the status of a device

Administrators can easily control users' access privileges

| Specifications SmartNetMonitor | |
|--------------------------------|--|
| Hardware Requirements | Intel 486/33MHz or faster 20MB of Hard Disk Space (Administrator) 30MB of Hard Disk Space (Client) 32MB of RAM (Recommended) |
| Operating Systems | Windows 95 (Supports all Service Packs), Windows 98/98SE (Supports all Service Packs), Windows 2000 Professional, Windows Millennium, Windows NT4.0, Windows 2000 Server, Windows XP Home and Professional |
| Protocols: | TCP/IP, IPX/SPX |
| Topology | Ethernet only |
